1. Description

1.1. Subject details

Name of the subject	93000922 - Radiofrequency Technologies
No of credits	6 ECTS
Type	Optional
Academic year of the programme	First year
Semester of tuition	Semester 1
Tuition period	September-January
Tuition languages	English
Degree programme	09AT - Master Universitario En Teoria De La SeÑal Y Comunicaciones
Centre	09 - Escuela Tecnica Superior de Ingenieros de Telecomunicacion
Academic year	2019-20

2. Faculty

2.1. Faculty members with subject teaching role

Name and surname	Office/Room	Email	Tutoring hours *
Jesus Grajal De La Fuente	C-420	jesus.grajal@upm.es	Sin horario. Appointment arranged by email
Miguel Angel Gonzalez De Aza	B-421D	miguelangel.gonzalez@upm.es	Sin horario. Appointment arranged by email

Francisco Eduardo Carrasco Yepez	B-417	eduardo.carrasco@upm.es	Sin horario. Appointment arranged by email
Gerardo Perez Palomino (Subject coordinator)	B-412	gerardo.perezp@upm.es	Sin horario. Appointment arranged by email

* The tutoring schedule is indicative and subject to possible changes. Please check tutoring times with the faculty member in charge.

3. Prior knowledge recommended to take the subject

3.1. Recommended (passed) subjects

The subject - recommended (passed), are not defined.

3.2. Other recommended learning outcomes

- Foundation of microwave engineering
- Working knowledge of MATLAB

4. Skills and learning outcomes *

4.1. Skills to be learned

CB06 - Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a menudo en un contexto de investigación

CB07 - Que los estudiantes sepan aplicar los conocimientos adquiridos y su capacidad de resolución de problemas en entornos nuevos o poco conocidos dentro de contextos más amplios (o multidisciplinares) relacionados con su área de estudio

CB08 - Que los estudiantes sean capaces de integrar conocimientos y enfrentarse a la complejidad de formular juicios a partir de una información que, siendo incompleta o limitada, incluya reflexiones sobre las responsabilidades sociales y éticas vinculadas a la aplicación de sus conocimientos y juicios

CB09 - Que los estudiantes sepan comunicar sus conclusiones y los conocimientos y razones últimas que las

sustentan a públicos especializados y no especializados de un modo claro y sin ambigüedades

CB10 - Que los estudiantes posean las habilidades de aprendizaje que les permitan continuar estudiando de un modo que habrá de ser en gran medida autodirigido o autónomo

CE01 - Analizar y aplicar técnicas para el diseño y desarrollo avanzado de equipos y sistemas, basándose en la teoría de la señal y las comunicaciones, en un entorno internacional

CE02 - Evaluar y sintetizar los resultados de un trabajo en equipo en proyectos relacionados con la teoría de la señal y las comunicaciones, en un entorno internacional.

CE03 - Valorar y contrastar la utilización de las diferentes técnicas disponibles para la resolución de problemas reales dentro del área de teoría de la señal y comunicaciones.

CETFM - Capacidad de realizar un trabajo o proyecto integrando y relacionando las competencias adquiridas en las distintas asignaturas del máster, junto con la capacidad de defenderlo en público ante un grupo de personas expertas en el tema del trabajo

CT01 - Capacidad para comprender los contenidos de clases magistrales, conferencias y seminarios en lengua inglesa

CT03 - Capacidad para adoptar soluciones creativas que satisfagan adecuadamente las diferentes necesidades planteadas

CT04 - Capacidad para trabajar de forma efectiva como individuo, organizando y planificando su propio trabajo, de forma independiente o como miembro de un equipo

CT05 - Capacidad para gestionar la información, identificando las fuentes necesarias, los principales tipos de documentos técnicos y científicos, de una manera adecuada y eficiente

CT06 - Capacidad para emitir juicios sobre implicaciones económicas, administrativas, sociales, éticas y medioambientales ligadas a la aplicación de sus conocimientos

4.2. Learning outcomes

RA10 - Capability to design systems and equipments for multimedia generation and distribution

RA12 - Capability to construct probabilistic models from experimental data using inference tools.

RA14 - Capability to model real phenomena using probability theory.

RA1 - Capacidad para desarrollar técnicas de tratamiento de señal específicas para datos masivos y diseñar aplicaciones sobre señales como: imágenes, señales de video, voz, audio y las procedentes de sensores de diversanaturaleza

RA13 - Capability to construct parameter estimators, hypothesis tests and linear regression models.

RA15 - Capability to relate the foundations of statistical inference with standard machine learning schemes.

RA19 - Knowledge of tools to design optimal filtering and signal processing structures

RA17 - Capacidad para aplicar conocimientos de modelado estadístico, técnicas de optimización y modelos de series temporales en el análisis de datos y como base para el desarrollo de algoritmos de aprendizaje automático

RA18 - Knowledge of tools for description, analysis and modeling of discrete-time random processes

* The Learning Guides should reflect the Skills and Learning Outcomes in the same way as indicated in the Degree Verification Memory. For this reason, they have not been translated into English and appear in Spanish.

5. Brief description of the subject and syllabus

5.1. Brief description of the subject

This course is a comprehensive approach to Radio Frequency (RF) systems and the technologies involved. This course is not a design course for active and passive components or circuits. It is a top-down approach that begins with the specifications of a system and finishes with the selection of the appropriate technology, components, and circuits to meet these specifications. An in-depth understanding of the variety of components in the market and their specifications and limitations are basic for a successful design of increasing complex RF systems.

This course presents advanced concepts related to passive and active microwave devices implemented in different technologies. Regarding to the passive devices, the technology is mainly focused on waveguide structures for the implementation of the components forming antenna feeders. Filters, multiplexers, beam-forming networks,

couplers, orthomode transducers and polarizers will be presented, analysing the required specifications when used in real communication systems. In connection with active components, a huge variety of components in different technologies with various operating regimes appears. Therefore, an effort has been carried out to select the most significant ones to cover the most important applications.

Both in-house software developed in Matlab as well as commercial software will be used to show the different strategies to analyse and design the different circuits and sub-systems presented in this course.

5.2. Syllabus

1. Circuit theory of microwave devices.

- 1.1. Outline of power waves and S parameters.
- 1.2. Signal flow graphs with S parameters.
- 1.3. S matrix properties: reciprocity, symmetry and unitary.
- 1.4. Z and Y parameters applied to microwave circuits.
- 1.5. S parameters measurement: calibration.
- 1.6. Reference plane shift applied to S matrix.
- 1.7. Reference impedance change applied to S matrix.
- 1.8. Two-port cascade connection with S parameters.
- 1.9. Bartlett theorem: symmetry of passive devices.
- 1.10. S parameters of lumped and distributed circuits: examples.
- 1.11. CAD of subsystems defined by S parameters.
- 1.12. Example of CAD using S parameters: 4x4 Butler matrix.

2. Waveguide concepts: application to passive devices.

- 2.1. Basic concepts of waveguides.
- 2.2. Rectangular waveguides: modes and symmetries.
- 2.3. Circular waveguide: modes and symmetries.
- 2.4. Waveguide engineering; industrial standards.

3. Planar Periodic Structures (PPS) concepts: application to passive devices

- 3.1. Overview of Planar Periodic Structures (PPS)
- 3.2. Modes and Symmetries

- 3.3. Equivalent Circuits of PSS and their applications
- 3.4. Radiation of PPS
- 3.5. Overview of PSS-based devices
- 3.6. Frequency Selective Surfaces (FSSs): types, wideband, single-double band
- 3.7. Polarization Controller Devices: Polarizers and Rotators
- 3.8. Antennas: Refectarrays and Transmitarrays
- 4. Hybrid technology (HMIC).
 - 4.1. Hybrid integrated technology. Substrates.
 - 4.2. Characteristics of planar transmission lines.
 - 4.3. Distributed and lumped elements in HMIC.
 - 4.4. Directional Couplers, Dividers and Combiners.
- 5. MMIC technology.
 - 5.1. Introduction to MMIC.
 - 5.2. Component technology and foundry choice.
 - 5.3. Active devices (Transistor types).
 - 5.4. Packaging Integration of MMICs in HMIC.
 - 5.5. Foundry use and economics.
- 6. RF and Microwave Solid State Amplifiers.
 - 6.1. Amplifier characteristics and definitions.
 - 6.2. Amplifier classes and analysis.
 - 6.3. Amplifier examples.
 - 6.4. Linearization Techniques.
 - 6.5. Thermal design.
 - 6.6. Power combining.
 - 6.7. Amplifier packages.
- 7. RF and microwave Solid State Oscillators.
 - 7.1. Fundamentals, Classification and Parameters.
 - 7.2. Crystal oscillators and oscillators with stabilized resonators.
 - 7.3. Frequency controlled oscillators.

7.4. Frequency synthesizers and direct digital synthesizers.

7.5. Noise in oscillators and system performance.

8. Control Components.

8.1. Attenuators.

8.2. Phase shifters and Time delay.

8.3. Circulators and isolators.

8.4. Switches and matrices.

9. Complementary materials.

9.1. Measurement equipments.

9.2. RF design tools.

10. Design of a selected RF system

10.1. Presentation of an RF system.

10.2. Clarification of objectives.

6. Schedule

6.1. Subject schedule*

Week	Face-to-face classroom activities	Face-to-face laboratory activities	Other face-to-face activities	Assessment activities
1	<p>Chapter 1. 1.1. Outline of power waves and S parameters. Duration: 02:00 Lecture</p> <p>Chapter 1. 1.2. Signal flow graphs with S parameters. 1.3. S matrix properties: reciprocity, symmetry and unitary. 1.4 Z and Y parameters applied to microwave circuits. 1.5. S parameters measurement: calibration. Duration: 02:00 Lecture</p>			
2	<p>Chapter 1. 1.6. Reference plane shift applied to S matrix. 1.7. Reference impedance change applied to S matrix. 1.8. Two-port cascade connection with S parameters. 1.9. Bartlett theorem: symmetry of passive devices. Duration: 02:00 Lecture</p> <p>Chapter 1. 1.10. S parameters of lumped and distributed circuits: examples. 1.11. CAD of subsystems defined by S parameters. 1.12. Example of CAD using S parameters: 4x4 Butler matrix. Duration: 01:00 Lecture</p> <p>Chapter 2. 2.1. Basic concepts of waveguides. Duration: 01:00 Lecture</p>			Homework 1 Individual work Continuous assessment Duration: 06:00
3	<p>Chapter 2. 2.2. Rectangular waveguides: modes and symmetries. Duration: 02:00 Lecture</p> <p>Chapter 2. 2.3. Circular waveguide: modes and symmetries. Duration: 02:00 Lecture</p>			

	Chapter 2. 2.4. Waveguide engineering; industrial standards. Duration: 02:00 Lecture			Homework 2 Individual work Continuous assessment Duration: 06:00
4	Chapter 3. 3.1 Overview of Planar Periodic Structures (PPS) Duration: 01:00 Lecture			
	Chapter 3. 3.2 Modes and Symmetries Duration: 01:00 Lecture			
5	Chapter 3. 3.2 Modes and Symmetries Duration: 02:00 Lecture			
	Chapter 3. 3.3 Equivalent Circuits of PPS and their applications Duration: 02:00 Lecture			
6	Chapter 3. 3.4 Radiation of PPS Duration: 01:00 Lecture			
	Chapter 3. 3.5. Overview of PPS-based devices Duration: 01:00 Lecture			
	Chapter 3. 3.6 Frequency Selective Surfaces (FSSs): types, single-double band, wideband Duration: 02:00 Lecture			
7	Chapter 3. 3.7. Polarization Controller Devices: Polarizers and Rotators Duration: 02:00 Lecture			Homework 3 Individual work Continuous assessment Duration: 06:00
	Chapter 3. 3.8. Antennas: Reflectarrays and Transmitarrays Duration: 02:00 Lecture			
8	Chapter 4: Hybrid technology (HMIC) - Hybrid integrated technology. Substrates. - Planar transmission lines. - Distributed and lumped elements in HMIC Duration: 02:00 Lecture			
	Chapter 4: Hybrid technology (HMIC) - Directional Couplers, Dividers and Combiners Duration: 02:00 Lecture			

9	Chapter 5: MMIC technology - Component technology - Active Devices - Packaging - Foundry use Duration: 02:00 Lecture		
10	Chapter 6: Microwave Amplifiers (4h) - Amplifier characteristics and definitions - Amplifier classes and analysis - Amplifier examples Duration: 02:00 Lecture		Homework 4 Individual work Continuous assessment Duration: 08:00
11	Chapter 6: Microwave Amplifiers - Power combining - Amplifier packages Duration: 02:00 Lecture		
12	Chapter 7: Microwave Oscillators - Fundamentals, Classification and Parameters - Crystal oscillators and oscillators with stabilized resonators - Frequency controlled oscillators Duration: 02:00 Lecture		
13	Chapter 7: Microwave Oscillators - Frequency synthesizers and direct digital synthesizers - Noise in oscillators and system performance Duration: 02:00 Lecture		
14	Chapter 8: Control Components - Attenuators - Phase shifters and Time delay - Circulators and isolators Duration: 02:00 Lecture		
	Chapter 8: Control Components - Switches and matrices Duration: 02:00 Lecture		
	Chapter 9: Complementary Materials (3h) - Measurement equipments - RF design tools Duration: 02:00 Lecture		
	Chapter 10: Design of a selected RF system Duration: 04:00 Lecture		Homework 5 Individual work Continuous assessment Duration: 08:00

15				
16				
17				<p>Final Design Individual work Continuous assessment Duration: 06:00</p> <p>Only final exam Written test Final examination Duration: 02:00</p>

The independent study hours are training activities during which students should spend time on individual study or individual assignments.

Depending on the programme study plan, total values will be calculated according to the ECTS credit unit as 26/27 hours of student face-to-face contact and independent study time.

* The subject schedule is based on a previous theoretical planning of the subject plan and might go through experience some unexpected changes along throughout the academic year.

7. Activities and assessment criteria

7.1. Assessment activities

7.1.1. Continuous assessment

Week	Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
2	Homework 1	Individual work	No Presential	06:00	15%	5 / 10	CB08 CB09 CT01 CB07 CT03 CB06 CE02 CT04 CE01 CT06 CE03 CT05 CB10
4	Homework 2	Individual work	No Presential	06:00	15%	5 / 10	CB09 CB07 CT03 CB06 CE02 CE01 CT06 CE03 CT05 CB10
7	Homework 3	Individual work	No Presential	06:00	20%	5 / 10	CB09 CB07 CT03 CB06 CE02 CE01 CT06 CE03 CT05 CB10

10	Homework 4	Individual work	No Presential	08:00	15%	5 / 10	CB09 CB07 CT03 CB06 CE02 CE01 CT06 CE03 CT05 CB10
14	Homework 5	Individual work	No Presential	08:00	15%	5 / 10	CB09 CB07 CT03 CB06 CE02 CE01 CT06 CE03 CT05 CB10
17	Final Design	Individual work	No Presential	06:00	20%	5 / 10	CB09 CB07 CT03 CB06 CE02 CE01 CT06 CE03 CT05 CB10

7.1.2. Final examination

Week	Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
17	Only final exam	Written test	Face-to-face	02:00	100%	5 / 10	CB08 CB09 CT01 CB07 CT03 CB06 CE02 CT04 CE01 CT06 CE03 CT05 CB10

7.1.3. Referred (re-sit) examination

Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
Extraordinary examination will be carried out exclusively by the final examination method.	Written test	Face-to-face	03:00	100%	5 / 10	CB08 CB09 CT01 CB07 CT03 CB06 CETFM CE02 CT04 CE01 CT06 CE03 CT05 CB10

7.2. Assessment criteria

Students will be qualified through continuous evaluation by default. If the student doesn't deliver the first homework before the deadline, it means that renounces to the continuous evaluation. Nevertheless, it is highly advisable to be evaluated through continuous evaluation.

Evaluation will assess if students have acquired all the competences of the subject. Thus, evaluation through final assessment will be carried out considering all the evaluation techniques used in continuous evaluation (EX, ET, TG, etc.), and will be celebrated in the exam period approved by Junta de Escuela for the current academic semester and year. Evaluation activities that assess learning outcomes that cannot be evaluated through a single exam can be carried out along the semester.

Extraordinary examination will be carried out exclusively by the final examination method.

The continuous evaluation is composed of five homeworks (80%) developed individually by the student and a final design (20%). The content of these homeworks will be directly related to the concepts exposed in the course. In the final design, a radiofrequency system will be implemented, being every student the designer of a specific part. In the case of a final assessment, an exam regarding to the concepts of the course will be the evaluation (100%).

8. Teaching resources

8.1. Teaching resources for the subject

Name	Type	Notes
Microwave Engineering, David.M. Pozar, John Wiley and Sons Inc., 2012, 4th edition.	Bibliography
