1. Description

1.1. Subject details

Name of the subject	93000926 - From Array Processing To Mimo Communications
No of credits	6 ECTS
Type	Optional
Academic year of the programme	First year
Semester of tuition	Semester 2
Tuition period	February-June
Tuition languages	English
Degree programme	09AT - Master Universitario en Teoria de la Señal y Comunicaciones
Centre	09 - Escuela Tecnica Superior de Ingenieros de Telecomunicacion
Academic year	2019-20

2. Faculty

2.1. Faculty members with subject teaching role

Name and surname	Office/Room	Email	Tutoring hours *
Miguel Alejandro Salas Natera	C-411	miguel.salas@upm.es	Sin horario. Appointment arranged by email
Santiago Zazo Bello	C-326	santiago.zazo@upm.es	Sin horario. Appointment arranged by email

Ramon Martinez Rodriguez- Osorio (Subject coordinator)	C-411	ramon.martinez@upm.es	Sin horario. Appointment arranged by email
Jose Manuel Fernandez Gonzalez	C-416	josemanuel.fernandez.gonza lez@upm.es	Sin horario. Appointment arranged by email

* The tutoring schedule is indicative and subject to possible changes. Please check tutoring times with the faculty member in charge.

3. Prior knowledge recommended to take the subject

3.1. Recommended (passed) subjects

- Temas Avanzados En Tecnología De Antenas

3.2. Other recommended learning outcomes

- Knowledge of matrix theory, digital transmission concepts and signal processing
- It is recommended to have a strong knowledge in basic concept about antennas, radiated fields, electromagnetic waves and basic antenna parameters
- It is recommended to know Matlab programming

4. Skills and learning outcomes *

4.1. Skills to be learned

CE01 - Analizar y aplicar técnicas para el diseño y desarrollo avanzado de equipos y sistemas, basándose en la teoría de la señal y las comunicaciones, en un entorno internacional

CE03 - Valorar y contrastar la utilización de las diferentes técnicas disponibles para la resolución de problemas reales dentro del área de teoría de la señal y comunicaciones.

CT01 - Capacidad para comprender los contenidos de clases magistrales, conferencias y seminarios en lengua inglesa

CT03 - Capacidad para adoptar soluciones creativas que satisfagan adecuadamente las diferentes necesidades planteadas

CT04 - Capacidad para trabajar de forma efectiva como individuo, organizando y planificando su propio trabajo, de forma independiente o como miembro de un equipo

CT05 - Capacidad para gestionar la información, identificando las fuentes necesarias, los principales tipos de documentos técnicos y científicos, de una manera adecuada y eficiente

4.2. Learning outcomes

RA31 - To carry out novel designs and applications in the field of MIMO antennas and systems

RA29 - Knowing the mathematical algorithms of adaptive antenna systems

RA47 - Knowing and evaluating MIMO systems

* The Learning Guides should reflect the Skills and Learning Outcomes in the same way as indicated in the Degree Verification Memory. For this reason, they have not been translated into English and appear in Spanish.

5. Brief description of the subject and syllabus

5.1. Brief description of the subject

This course covers the two main multiple antenna techniques: antenna array processing and MIMO systems. Both topics are covered from a formal perspective, starting with signal models as the basics to develop the diversity techniques. The course covers not only mathematical and signal processing aspects, but also the impact of selecting a particular implementation or antenna array, how multiple antenna techniques are introduced in current communication standards, and how the wireless channel affects system performance. Thus, students finish the course with an integrated vision on multiple antenna diversity techniques, system level impact and implementation issues.

The course starts with an introduction that includes the mathematical foundations of multiple antenna techniques (information theory, matrix theory and estimation).

Next unit deals with the first group of multiple antenna systems, i.e antenna array processing techniques and direction of arrival methods. The first part covers time and spatial reference approaches, and explains different adaptive algorithms and beamforming approaches. The direction of arrival sessions cover conventional or search methods based on exploiting the power angular spectrum, and subspace based methods.

The third unit covers MIMO systems, starting with Single User MIMO channel models, capacity, architectures (diversity techniques, space-time coding and spatial multiplexing) and receivers. It continues with Multiple User MIMO (MU MIMO), that includes signal and channel models, suboptimum approaches and optimum beamformers and power allocation in uplink and downlink scenarios.

The last unit covers multiple antenna technologies, beginning with an explanation of the impairments that are found in the implementation of a multiple antenna system (mutual coupling, phase noise, imbalances in RF). The unit continues with a description of MIMO system architectures from RF front-ends and antenna to signal processing hardware, and the calibration issues required for the system to work properly. Finally, a set of case study presented by students to explain the use of multiple antenna techniques to particular scenarios.

Course contents are presented under the theoretical point of view and complemented with the practical simulation or exercises along the course.

5.2. Syllabus

1. Introduction to multiple antenna systems (4h)
 - 1.1. Course presentation
 - 1.2. Introduction to multiple antenna systems
 - 1.2.1. Multiple antennas: system aspects
 - 1.2.2. Mathematical foundations
2. Antenna array processing and Direction of Arrival techniques (12h)
 - 2.1. Antenna array processing
 - 2.1.1. Signal model
 - 2.1.2. Adaptive antennas. Time reference. Wiener, LMS and RLS solutions
 - 2.1.3. Adaptive antennas. Spatial reference. Capon and GSLC methods
 - 2.2. Direction of arrival techniques
 - 2.2.1. Signal model
 - 2.2.2. Conventional methods
 - 2.2.3. Subspace based methods
3. MIMO systems (12+8+8h)
 - 3.1. Signal and channel modelling in SU MIMO systems
 - 3.1.1. Propagation models in multiantenna scenarios
 - 3.1.2. MIMO signal and space-time channel model
 - 3.2. SU MIMO channel capacity
 - 3.2.1. Capacity of SIMO, MIMO, SIMO and MIMO systems: channel unknown at transmitter
 - 3.2.2. capacity of SIMO, MIMO, SIMO and MIMO systems: channel known at transmitter. Waterfilling
 - 3.3. Single User MIMO architectures (SU MIMO)
 - 3.3.1. Diversity techniques
 - 3.3.2. Space-Time coding techniques
 - 3.3.3. Spatial Multiplexing
 - 3.3.4. MIMO receivers. Spatial matched filters, ZF and MMSE receivers. SIC receivers
 - 3.4. Multiuser MIMO (MU MIMO)

- 3.4.1. Signal and channel model in MU MIMO
- 3.4.2. Suboptimum approaches
- 3.4.3. Optimum beamformer and power allocation in uplink
- 3.4.4. Optimum beamformer and power allocation in downlink
- 3.5. Massive MIMO
 - 3.5.1. Introduction. Fundamentals and limitations
 - 3.5.2. Signal and channel model in single cell and multiple cell scenarios
 - 3.5.3. Optimum decoder and precoder in Massive MIMO arrays
- 4. Multiple antenna technologies (12h)
 - 4.1. Implementation of multiple antenna systems
 - 4.1.1. Modelling of multiple antenna architectures. Impairments in analog and digital domains
 - 4.1.2. Calibration
 - 4.1.3. Technologies in antennas, analog and digital domains
 - 4.2. Case studies

6. Schedule

6.1. Subject schedule*

Week	Face-to-face classroom activities	Face-to-face laboratory activities	Other face-to-face activities	Assessment activities
1	Introduction to the course Duration: 02:00 Lecture Mathematical foundations Duration: 02:00 Lecture			
2	Antenna array processing Duration: 02:00 Lecture Antenna array processing Duration: 02:00 Lecture			
3	Antenna array processing Duration: 01:00 Lecture Antenna array processing Duration: 01:00 Problem-solving class Direction of Arrival techniques Duration: 02:00 Lecture			
4	Direction of Arrival techniques Duration: 02:00 Lecture	Adaptive beamforming and DOA models Duration: 02:00 Laboratory assignments		Adaptive antenna codes Individual work Continuous assessment Duration: 00:00
5	Single user MIMO Duration: 02:00 Lecture Single user MIMO Duration: 02:00 Lecture			
6	Single user MIMO Duration: 02:00 Lecture	SU MIMO Duration: 02:00 Laboratory assignments		
7	Single user MIMO Duration: 02:00 Lecture Single user MIMO Duration: 02:00 Problem-solving class			Single user mimo lab manual Individual work Continuous assessment Duration: 00:00

8	<p>Multi-User MIMO Duration: 02:00 Lecture</p> <p>Multi-User MIMO Duration: 02:00 Lecture</p>			
9	<p>Multi-User MIMO Duration: 02:00 Lecture</p> <p>Multi-User MIMO Duration: 02:00 Problem-solving class</p>			
10	<p>Massive MIMO Duration: 04:00 Lecture</p>			
11	<p>Massive MIMO Duration: 02:00 Lecture</p> <p>Massive MIMO Duration: 02:00 Problem-solving class</p>			<p>MU MIMO and Massive MIMO codes Individual work Continuous assessment Duration: 00:00</p>
12	<p>Multiple antenna technologies Duration: 03:00 Lecture</p> <p>Multiple antenna technologies Duration: 01:00 Problem-solving class</p>			
13	<p>Multiple antenna technologies Duration: 02:00 Lecture</p>	<p>Calibration lab Duration: 02:00 Laboratory assignments</p>		<p>Calibration lab manual Individual work Continuous assessment Duration: 00:00</p>
14	<p>Multiple antenna technologies Duration: 02:00 Problem-solving class</p>	<p>Case study presentation Duration: 02:00 Additional activities</p>		<p>Case study oral presentation. Group presentation Continuous assessment and final examination Duration: 02:00</p>
15				
16				
17				<p>Final exam Written test Final examination Duration: 02:00</p> <p>Exam Written test Continuous assessment Duration: 02:00</p> <p>Submission of labs and exercises Individual work Final examination Duration: 00:00</p>

The independent study hours are training activities during which students should spend time on individual study or individual assignments.

Depending on the programme study plan, total values will be calculated according to the ECTS credit unit as 26/27 hours of student face-to-face contact and independent study time.

* The subject schedule is based on a previous theoretical planning of the subject plan and might go to through experience some unexpected changes along throughout the academic year.

7. Activities and assessment criteria

7.1. Assessment activities

7.1.1. Continuous assessment

Week	Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
4	Adaptive antenna codes	Individual work	No Presential	00:00	12.5%	3 / 10	CT01 CE01 CE03 CT05
7	Single user mimo lab manual	Individual work	No Presential	00:00	12.5%	3 / 10	CT01 CE01 CE03 CT05
11	MU MIMO and Massive MIMO codes	Individual work	No Presential	00:00	12.5%	3 / 10	CT01 CE01 CE03 CT05
13	Calibration lab manual	Individual work	No Presential	00:00	12.5%	3 / 10	CE01 CT03 CT01 CT05
14	Case study oral presentation.	Group presentation	Face-to-face	02:00	20%	3 / 10	CE03 CT05 CT04
17	Exam	Written test	Face-to-face	02:00	30%	3 / 10	CT01 CE01 CE03 CT03

7.1.2. Final examination

Week	Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
14	Case study oral presentation.	Group presentation	Face-to-face	02:00	20%	3 / 10	CE03 CT05 CT04
17	Final exam	Written test	Face-to-face	02:00	50%	3 / 10	CT01 CE01 CE03 CT03

17	Submission of labs and exercises	Individual work	No Presential	00:00	30%	3 / 10	CT03 CT05 CT01
----	----------------------------------	-----------------	---------------	-------	-----	--------	----------------------

7.1.3. Referred (re-sit) examination

Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
Final exam	Individual presentation	Face-to-face	02:00	50%	3 / 10	CE03 CT03 CT01 CE01
Submission of labs and exercises	Individual work	Face-to-face	00:00	30%	3 / 10	CT01 CE01 CT03 CT05
Case study oral presentation.	Individual presentation	Face-to-face	00:30	20%	3 / 10	CE03 CT05 CT04

7.2. Assessment criteria

Students will be qualified through continuous evaluation by default. According to the Normativa de Evaluación del Aprendizaje de la Universidad Politécnica de Madrid, students willing to renounce to continuous evaluation must complete the Moodle task entitled "Renounce to continuous evaluation" before week four (exact date will be announced at the beginning of the course).

Evaluation will assess if students have acquired all the competences of the subject. Thus, evaluation through final assessment will be carried out considering all the evaluation techniques used in continuous evaluation (EX, ET, TG, etc.), and will be celebrated in the exam period approved by Junta de Escuela for the current academic semester and year. Evaluation activities that assess learning outcomes that cannot be evaluated through a single exam can be carried out along the semester.

Extraordinary examination will be carried out exclusively by the final assessment method.

Evaluation items and qualification criteria

The continuous evaluation is composed of the following items:

1. Individual and laboratory exercises (50%). They shall be delivered along the course, in general by the end of the units. These activities can be carried out on-site or be proposed as homework. Attendance to on-site activities will be mandatory for all students. The qualification of this item will be obtained as the average of the marks obtained in each of the individual and laboratory exercises.
2. Case study (20%). Students shall prepare and provide a short oral presentation about the use of multiple antenna techniques applied to the proposed case study (e.g. discuss the use of antenna arraying for a radar system, or evaluate how multiple antenna techniques are introduced in 802.11ac). It will be done individually or in groups of two students, depending on the number of students enrolled in the course. This activity is mandatory for all students in the course.
3. Exam (30%). Written exam with theoretical questions and short exercises. A minimum of 3 points out of 10 is required to pass the exam.

Continuous evaluation

The qualification mark in continuous evaluation will be calculated as: $0.5 \cdot (\text{Individual and lab exercises}) + 0.2 \cdot (\text{Case study}) + 0.3 \cdot (\text{Exam})$

Final ordinary evaluation

The qualification mark in the final evaluation will be calculated as: $0.3 \cdot (\text{Individual and lab exercises}) + 0.2 \cdot (\text{Case study}) + 0.5 \cdot (\text{Exam})$

The exam could include an oral part if required by the lecturers.

Final extraordinary exam

The qualification mark in the final evaluation will be calculated as: $0.3 \cdot (\text{Individual and lab exercises}) + 0.2 \cdot (\text{Case study}) + 0.5 \cdot (\text{Exam})$

The exam could include an oral part if required by the lecturers.

8. Teaching resources

8.1. Teaching resources for the subject
