## 1. Description

### 1.1. Subject details

Name of the subject	93000943 - Machine Learning Lab
No of credits	4.5 ECTS
Type	Optional
Academic year of the programme	First year
Semester of tuition	Semester 1
Tuition period	September-January
Tuition languages	English
Degree programme	09AT - Master Universitario En Teoria De La SeÑal Y Comunicaciones
Centre	09 - Escuela Tecnica Superior de Ingenieros de Telecomunicacion
Academic year	2019-20

## 2. Faculty

### 2.1. Faculty members with subject teaching role

Name and surname	Office/Room	Email	Tutoring hours *
Luis Alfonso Hernandez Gomez (Subject coordinator)	C-330	luisalfonso.hernandez@upm.es	Sin horario. Appointment arranged by email
Eduardo Lopez Gonzalo	C-330	eduardo.lopez@upm.es	Sin horario. Appointment arranged by email

\* The tutoring schedule is indicative and subject to possible changes. Please check tutoring times with the faculty member in charge.

### 3. Prior knowledge recommended to take the subject

---

#### 3.1. Recommended (passed) subjects

- Aprendizaje Predictivo Y Descriptivo

#### 3.2. Other recommended learning outcomes

- It is highly recommended to follow this course simultaneously with the subject Predictive and Descriptive Learning unless you have a theoretical background in Machine Learning and Deep Learning
- Previous exposure to a programming language, such as MATLAB, R or Python

### 4. Skills and learning outcomes \*

---

#### 4.1. Skills to be learned

CB06 - Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a menudo en un contexto de investigación

CB07 - Que los estudiantes sepan aplicar los conocimientos adquiridos y su capacidad de resolución de problemas en entornos nuevos o poco conocidos dentro de contextos más amplios (o multidisciplinares) relacionados con su área de estudio

CB08 - Que los estudiantes sean capaces de integrar conocimientos y enfrentarse a la complejidad de formular juicios a partir de una información que, siendo incompleta o limitada, incluya reflexiones sobre las responsabilidades sociales y éticas vinculadas a la aplicación de sus conocimientos y juicios

CB09 - Que los estudiantes sepan comunicar sus conclusiones y los conocimientos y razones últimas que las sustentan a públicos especializados y no especializados de un modo claro y sin ambigüedades

CB10 - Que los estudiantes posean las habilidades de aprendizaje que les permitan continuar estudiando de un modo que habrá de ser en gran medida autodirigido o autónomo

CE01 - Analizar y aplicar técnicas para el diseño y desarrollo avanzado de equipos y sistemas, basándose en la teoría de la señal y las comunicaciones, en un entorno internacional

CE02 - Evaluar y sintetizar los resultados de un trabajo en equipo en proyectos relacionados con la teoría de la señal y las comunicaciones, en un entorno internacional.

CE03 - Valorar y contrastar la utilización de las diferentes técnicas disponibles para la resolución de problemas reales dentro del área de teoría de la señal y comunicaciones.

CT01 - Capacidad para comprender los contenidos de clases magistrales, conferencias y seminarios en lengua inglesa

CT03 - Capacidad para adoptar soluciones creativas que satisfagan adecuadamente las diferentes necesidades planteadas

CT04 - Capacidad para trabajar de forma efectiva como individuo, organizando y planificando su propio trabajo, de forma independiente o como miembro de un equipo

CT05 - Capacidad para gestionar la información, identificando las fuentes necesarias, los principales tipos de documentos técnicos y científicos, de una manera adecuada y eficiente

CT06 - Capacidad para emitir juicios sobre implicaciones económicas, administrativas, sociales, éticas y medioambientales ligadas a la aplicación de sus conocimientos

## 4.2. Learning outcomes

RA7 - Capacidad para desarrollar y evaluar técnicas de aprendizaje automático y diseñar sistemas de aprendizaje para datos masivos

RA34 - Capability to develop and evaluate machine-learning techniques and to design big data learning systems

\* The Learning Guides should reflect the Skills and Learning Outcomes in the same way as indicated in the Degree Verification Memory. For this reason, they have not been translated into English and appear in Spanish.

## 5. Brief description of the subject and syllabus

### 5.1. Brief description of the subject

In this laboratory students will learn how to apply the variety of Machine Learning methods presented in the Predictive and Descriptive Learning course to practical scenarios. Students will practice using scientifically-oriented processing environments and most common programming languages and machine learning libraries (TensorFlow, Keras, Python scikit-learn, ML libraries in R).

Along the course students will address practical problems on the application of the variety of Machine Learning methods presented in the Predictive and Descriptive Learning course. Experimental activities will cover both predictive or supervised learning (from classical linear and logistic regression or random forest and SVM to Deep Learning -Feed-forward, Convolutional Networks, Recurrent Networks) and descriptive or unsupervised prevised learning (principal component analysis, t-SNE and cluster analysis). Several realistic and practical scenarios and use cases will be addressed (as those proposed in Kaggle competition, [www.kaggle.com](http://www.kaggle.com)). Students will practice using scientifically-oriented languages and cloud environments, mainly working with Python and R languages. Through all lab activities students will have to gain practice on model accuracy using cross-validation and on how to draw precise conclusions and valuable interpretations from machine learning results and models.

The students will acquire the skill to apply the variety of Machine Learning methods on to practical scenarios. Main course outcome will be to consolidate the theoretical study of machine learning techniques along this Master Programme. Through hands-on experience case studies students will learn how to select and accurately assess the performance evaluation of machine learning methods. They will also acquire solid criteria on what could be best model for a given data and task as well to be able to draw precise conclusions and interpretations from experimental results. By the end of the course, students should be able to:

- Understand how to apply the most used models and techniques for predictive and descriptive learning to different real scenarios.
- Design a proper experimental methodology for accurately assessing and gaining knowledge from the use of each one of the different machine learning techniques.
- Work with both scientifically-oriented processing environments and cluster computing frameworks for big data

processing that can be used in a wide range of applications in science and industry.

## 5.2. Syllabus

### 1. Introduction to Machine Learning Lab

#### 1.1. Designing a Machine Learning System

#### 1.2. Introducing Python for DataScience and Machine Learning

### 2. Linear Regression

#### 2.1. Developing interpretable Linear Regression models

### 3. Classification

#### 3.1. Developing and understanding Logistic Regression models

### 4. Resampling methods

#### 4.1. Using Cross-Validation and Bootstrap

### 5. Tree-Based Methods

#### 5.1. Decision trees, Bagging, Random Forests and Boosting

### 6. Support Vector Machines

#### 6.1. Kernels and Support Vector Machines

### 7. Descriptive Learning

#### 7.1. Principal Components Analysis, t-SNE, K-means and Hierarchical Clustering

### 8. Introduction to Deep Learning

#### 8.1. Simple Neural Network in TensorFlow (Basic Deep Learning Design Methodology)

#### 8.2. Feed-Forward Neural Networks (TensorFlow and Keras)

#### 8.3. Convolutional Networks for Images and Signals (TensorFlow and Keras)

#### 8.4. Recurrent Neural Networks: Signal and Natural Language Processing use cases (Keras)

#### 8.5. Advanced Deep Learning architectures

### 9. Building Machine Learning Pipelines

## 6. Schedule

---

### 6.1. Subject schedule\*

Week	Face-to-face classroom activities	Face-to-face laboratory activities	Other face-to-face activities	Assessment activities
1	<b>Introduction to Machine Learning Systems</b> Duration: 03:00 Lecture			
2		<b>Linear and Logistic Regression Models</b> Duration: 03:00 Laboratory assignments		
3		<b>Linear and Logistic Regression Models</b> Duration: 03:00 Laboratory assignments		
4		<b>Resampling methods</b> Duration: 03:00 Laboratory assignments		
5		<b>Tree-based models</b> Duration: 03:00 Laboratory assignments		
6		<b>Support Vector Machines</b> Duration: 03:00 Laboratory assignments		
7		<b>Descriptive Learning</b> Duration: 03:00 Laboratory assignments		
8		<b>Python for DataScience and Machine Learning</b> Duration: 03:00 Laboratory assignments		
9		<b>Review: Developing Machine Learning models</b> Duration: 03:00 Laboratory assignments		<b>Evaluation: Developing Machine Learning models</b> Individual presentation Continuous assessment Duration: 00:10
10		<b>Feed-forward Networks in TensorFlow and Keras</b> Duration: 03:00 Laboratory assignments		
11		<b>Convolutional Networks for Images and Signals</b> Duration: 03:00 Laboratory assignments		
12		<b>RNN for Signals and NLP</b> Duration: 03:00 Laboratory assignments		

13	<b>Building Machine Learning Pipelines</b> Duration: 01:00 Laboratory assignments	<b>Advanced Deep Learning</b> Duration: 02:00 Laboratory assignments		
14		<b>Building Machine Learning Pipelines</b> Duration: 03:00 Laboratory assignments		
15				
16				
17				<b>Final project evaluation</b> Group presentation Continuous assessment Duration: 00:15  <b>Evaluation: Developing Machine Learning models</b> Individual presentation Final examination Duration: 00:10  <b>Final project evaluation</b> Group presentation Final examination Duration: 00:15

The independent study hours are training activities during which students should spend time on individual study or individual assignments.

Depending on the programme study plan, total values will be calculated according to the ECTS credit unit as 26/27 hours of student face-to-face contact and independent study time.

\* The subject schedule is based on a previous theoretical planning of the subject plan and might go through experience some unexpected changes along throughout the academic year.

## 7. Activities and assessment criteria

---

### 7.1. Assessment activities

#### 7.1.1. Continuous assessment

Week	Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
9	Evaluation: Developing Machine Learning models	Individual presentation	Face-to-face	00:10	40%	/ 10	CB08 CB09 CT01 CB07 CT03 CB06 CE02 CT05 CB10
17	Final project evaluation	Group presentation	Face-to-face	00:15	60%	/ 10	CT01 CB07 CT03 CB06 CE02 CT04 CE01 CT06 CE03 CB08 CB09 CT05 CB10

#### 7.1.2. Final examination

Week	Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
17	Evaluation: Developing Machine Learning models	Individual presentation	Face-to-face	00:10	40%	/ 10	CB08 CB09 CT01 CB07 CT03 CB06 CE02 CT05 CB10

17	Final project evaluation	Group presentation	Face-to-face	00:15	60%	/ 10	CT01 CB07 CT03 CB06 CE02 CT04 CE01 CT06 CE03 CB08 CB09 CT05 CB10
----	--------------------------	--------------------	--------------	-------	-----	------	--

### 7.1.3. Referred (re-sit) examination

Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
Evaluation: Developing Machine Learning models	Individual presentation	Face-to-face	00:10	40%	/ 10	CB09 CT01 CB07 CT03 CB08 CB06 CE02 CT05 CB10
Final project evaluation	Group presentation	Face-to-face	00:15	60%	/ 10	CB07 CT03 CB06 CE02 CT04 CE01 CT06 CE03 CT05 CB10 CB08 CB09 CT01

## 7.2. Assessment criteria

Students will be qualified through continuous evaluation by default. According to the Normativa de Evaluación del Aprendizaje de la Universidad Politécnica de Madrid, students willing to renounce to continuous evaluation must complete the Moodle task entitled "Renounce to continuous evaluation" before the fourth week of the semester (deadline will be announced in Moodle).

Evaluation will assess if students have acquired all the competences of the subject. Thus, evaluation through final assessment will be carried out considering all the evaluation techniques used in continuous evaluation (EX, ET, TG, etc.), and will be celebrated in the exam period approved by Junta de Escuela for the current academic semester and year. Evaluation activities that assess learning outcomes that cannot be evaluated through a single exam can be carried out along the semester.

Extraordinary examination will be carried out exclusively by the final assessment method.

Continuous assessment will consist of:

- Individual presentations to demonstrate skills in developing machine learning models will be made by mid-semester (40% of final grade).
- A final collaborative project will be developed to be evaluated by the end of the semester. Evaluation will cover both individual achievements in Machine Learning, and more specifically Deep Learning models, as well as the development of teamwork skills, as this is one of the learning objectives for the course (final project assessment will represent 60% of the final grade).

Final assessment:

Those students that have renounced to continuous evaluation should address a final examination including both individual presentations to demonstrate skills in developing machine learning models (40% of final grade) and their final collaborative project covering machine learning and deep learning models (60% of the final grade).

Extraordinary examination:

Extraordinary examination consists of an individual presentations to demonstrate skills in developing machine learning models (40% of final grade) and a final collaborative project focused on machine learning and deep learning models (60% of the final grade).

## 8. Teaching resources

### 8.1. Teaching resources for the subject

Name	Type	Notes
Hands-on machine learning with Scikit-Learn and TensorFlow: concepts, tools, and techniques to build intelligent systems	Bibliography	Géron, Aurélien.
